

Figure S10. Commonly detected changed-tissues *jIDE* genes. Proportions of three kinds of changed-tissues *jIDE* genes were shown. **Dark blue bars** indicate *jIDE* was observed only in the NM combination. **Dark beige bars** indicate *jIDE* was observed in both NM and NZ combinations. **Light blue bars** indicate *jIDE* was observed only in the NZ combination. Numbers in the tissue labels are total numbers of changed-tissues *jIDE* genes.
